# LOCALIZING SDG INDICATORS

## Additional focus areas

The local analysis included **13** local documents and **69** interviews. Based on the local expertise, we were able to identify relevant issues that needed more attention in the local indicator set. Those are the highlights:

**LGBTQ2+**

Non-binary gender is a reality present in our everyday lives and a group we can't leave behind.

**MENTAL HEALTH**

It affects a significant number of people of all ages with negative impact to our social and economic well-being.

**RECONCILIATION**

One of the most relevant issues in Canada. There are three first nations communities in London ON.

**CYCLING**

Transportation is one of the main drivers of climate change and cycling has a positive impact in at least twelve SDGs.

**URBAN AGRICULTURE**

London is situated in one of the most fertile regions of Canada and sustainable food production must include urban areas.

**WEALTH INEQUALITY**

Distribution of wealth is far more relevant than economic growth.

**FINITE RESOURCES**

It's necessary to shift indicators that are based on constant growth given the limits of our ecosystem.
